EDUCATION

Jamia Hamdard University

Bachelor of Technology in Computer Science

New Delhi, India

2027- 81.3% (Till 6th sem.)

EXPERIENCE & PARTICIPATION

Accenture

Developer and Technology Job Simulation - Internship

Nov. 2024 – Dec. 2024

- Completed practical development tasks covering SDLC, software testing, debugging, and software development methodologies
- Applied algorithmic thinking and debugging techniques to analyze problems and develop practical technology-focused solutions
- Gained practical exposure to Agile and Waterfall methodologies and their application across software development workflows

Bharatiya Antariksh Hackathon ISRO

2025

HealthBridge – Healthcare Platform

- Proposed HealthBridge, a unified healthcare platform connecting patients, doctors, records, appointments, and pharmacies
- Designed seamless features for doctor discovery, appointment booking, medical records, chat, scheduling, and medicine delivery
- Scalable and secure architecture with integrated pharmacy support, future AI-powered health insights for improved patient care

PROJECTS

Insurance Premium Prediction | React.js, Tailwind CSS, FastAPI, Python, PostgreSQL, SQLAlchemy

- Developed a medical insurance premium predictor using Python and FastAPI to automate health insurance cost estimations
- Implemented JWT authentication, password hashing, routes and user profiles for secure application access and data protection
- Integrated machine-learning prediction using age, BMI, smoking, gender, and children count through FastAPI REST APIs
- Built prediction history with PostgreSQL and SQLAlchemy to store, retrieve, and review previous insurance predictions
- Managed project dependencies and version control using Git, GitHub, vercel, Render, and modular Python package structures

E-Commerce Platform | MongoDB, Express.js, React.js, Node.js

- Built a scalable full-stack web application with product browsing, dynamic cart management, and seamless checkout operations
- Implemented secure user authentication and authorization using JWT and bcrypt with protected routes for user profiles
- Developed API endpoints in Node.js and Express to handle database CRUD operations and asynchronous client data transfer
- Built a responsive React.js UI with reusable components, client-side routing, and centralized cart state management
- Designed an admin dashboard to handle product inventory creation, stock management, and customer order tracking

Kids Portal – Interactive Learning Platform -Academic Project | React, FastAPI, Tailwind CSS, WebSocket, Docker

- Collaborated to build an interactive learning platform for children, contributing across multiple areas of the application
- Built the About Us and Videos pages and contributed to other website sections within a collaborative development workflow
- Developed a support chatbot that matches incoming visitor queries with predefined responses, Integrate whatsapp button
- Engineered a tiered content access control model to gate premium features and support subscription-based business logic
- Implemented role-based access control and admin management interfaces for content creation and platform monitoring
- Evaluated data safety standards and resolved communication gaps across system components to harden application security
- Containerized application workflows using Docker and managed source code, pipelines, and collaboration through GitLab

Patient-Doctor API | Python, FastAPI, Pydantic, REST API, CRUD

- Built a RESTful API using Python and FastAPI providing full CRUD operations for managing patient and doctor records
- Implemented data validation and computed fields with Pydantic to calculate BMI and determine patient health classifications
- Engineered search, multi-field filtering, and sorting capabilities using FastAPI Path and Query parameters and stored in DB
- Integrated JSON data persistence with custom error handling and standardized HTTP responses for reliable data processing
- Designed interactive, auto-generated API documentation using OpenAPI and for seamless integration and endpoint testing

TECHNICAL SKILLS

Programming languages: JavaScript, C++, Python, SQL

Frontend: React.js, Tailwind CSS, HTML5, CSS3

Backend: Node.js, Express.js, FastAPI, Pydantic, JWT, REST APIs

Databases: PostgreSQL, MongoDB, MySQL, SQLAlchemy, Redis

AI & Automation: LLM, RAG, n8n

Tools & Platforms: Git, GitHub, GitLab, Postman, VS Code, Docker, Axios, Canva, Vercel

POSITION OF RESPONSIBILITY

Tech Team Member – Tezos Society, Jamia Hamdard University

2023–Present

- * Coordinated technical workshops, hackathons, and awareness events, supporting end-to-end planning and execution
- * Collaborated with team members to manage technical operations, maintain event platforms, and support student engagement
